*"For All Your Lawn and Landscape Needs"*

## BERMUDA / ZOYSIA TURF PROGRAM

**LATE WINTER TREATMENT:** We apply pre-emergent weed control to stop crabgrass and annual spring weeds before they start and broadleaf and grassy weed controls to keep unsightly winter weeds from over-running your dormant lawn.

**SPRING TREATMENT:** We apply a second application of pre-emergent to help control crabgrass and other annual weeds. Our broadleaf and grassy weed controls further battle weeds.

**LATE SPRING TREATMENT:** We apply a heavy rate of fertilizer to help awaken your lawn from winter dormancy. Pre-emergent weed controls help extend control through the late summer months and we spot treat for broadleaf or grassy weeds as necessary.

**EARLY SUMMER TREATMENT:** Our special blend of slow release fertilizer feeds your lawn when it is growing fastest and maintains the color. We spot treat for broadleaf or grassy weeds as necessary and apply insect controls if turf-damaging levels are present.

**SUMMER TREATMENT:** Our heavy rate of balanced slow release fertilizer helps maintain color and encourages turf density during your turf's peak nutritional needs. We spot treat for broadleaf or grassy weeds as necessary and apply insect controls if turf-damaging levels are present.

**EARLY FALL TREATMENT:** Our pre-emergent weed control helps prevent poa-anna and other winter annual weeds. Our fertilizer is designed to supply your lawn with the necessary nutrients prior to winter. We spot treat for broadleaf or grassy weeds as necessary.

**LATE FALL TREATMENT:** Our second application of pre-emergent weed control helps keep winter annual weeds from overrunning your lawn during winter dormancy. We spot treat for broadleaf or grassy weeds as necessary.

**WINTER TREATMENT:** We add lime to help balance and maintain your soil's pH. Balanced soil pH allows for proper uptake of essential plant nutrients. We spot treat for broadleaf or grassy weeds as necessary.

Grassy weeds such as nutgrass, dallisgrass, and other types of grasses and broadleaf weeds are treated with our regular application at no additional charge. If present, turf damaging insect and fungus are treated at no charge for full service customers. Preventive applications for grubs, fire ants, and fleas & ticks are available at an additional charge. **We offer free service calls between applications as needed.**
