*"For All Your Lawn and Landscape Needs"*

## TREE & SHRUB PROGRAM

**Late Winter Spray:** Our special application of horticultural oil will help control certain difficult insects like scale and mites in the overwintering stage, before damage occurs.

**Spring Fertilization:** We fertilize the trees and shrubs to promote spring growth while increasing the plant's ability to ward off summer stress.

**Late Spring Spraying:** We spray on foliar and systemic insect and disease controls to reduce the population of insects and help prevent diseases.

**Early Summer Spray:** We spray on foliar and systemic insect and disease controls to reduce the population of insects and help prevent diseases.

**Summer Spray:** We spray on foliar and systemic insect and disease controls to reduce the population of insects and help prevent diseases.

**Early Fall Spray:** We spray on foliar and systemic insect and disease controls to reduce the population of insects and help prevent diseases.

**Fall Fertilization:** We apply fertilizer to help promote root and bud development for the upcoming year. This application helps increase flowering of ornamentals such as azaleas, crepe myrtles and dogwoods.

We designed this program to help prevent and control insect and disease problems, as well as provide your plants with all their fertilization needs. Of course, this program is not a guarantee for all problems that may occur on your plants - problems like boring insects, cultural problems, and certain systemic diseases cannot be controlled in this manner. We only treat plants under 20ft tall. **We offer free service calls between applications as needed.**
